

Step 1: Lay good sides of both outer fabric and liner together and cut according to template.

I have added approximately $\frac{3}{4}$ inch to the inner side of the template to allow for the channel for ear straps.

Step 2: Join center seam

Join the curved seam that is center of our mask by placing the *good sides together* and sewing them in place.

Repeat this step for both the outer (main) fabric, and the inner (lining) fabric.

Step 3 (optional): Press the center seam

This step has no functional value, it will only make your mask look better. So if you're not too bothered about that, feel free to skip it.

Press the seam allowance on the center seam open so the seam lies nice and flat. As this is a curved seam, it won't lay flat. But you can approach it with your iron from one side, then do the second half from the other side. Alternatively, you can use a tailor's ham or cushion to press. Repeat this step for both the outer (main) fabric, and the inner (lining) fabric.

Step 4: Sew the outer to the inner fabric

Now we will sew the inner (lining) fabric to the outer (main) fabric, leaving the sides open

- Place your lining fabric down with the good side up.
- Now place the main fabric on top of this with the good side down. You should now have both layers of your mask on top of each other with *good sides together* and two ribbons sandwiched between them
- Pin through layers to keep them in place

Now sew the top hem (arched) and bottom hem (mostly straight) leaving the sides open.

Step 5: Turn the mask inside-out

Actually, your mask is inside-out now, so turning it inside out will mean we get it outside-out, or regular.

Just reach in through the side your left open and carefully pull the mask through to turn it.

Step 5: Turn the sides doubly, Press the mask, and sew channel seam.

Double turn the side edges and press to create a channel for the ear straps. Sew a seam leaving enough space for straps to be inserted. Insert elastic, ribbon or preferred strap material.

Step 6: (Optional) Edge-stitch around the edge

Edge-stitch around the entire mask to give our mask some extra stability, and keep the lining at the back.

Make sure the open side is folded neatly inside, then edge-stitch around the entire mask. Press the mask.

Fu Face Mask

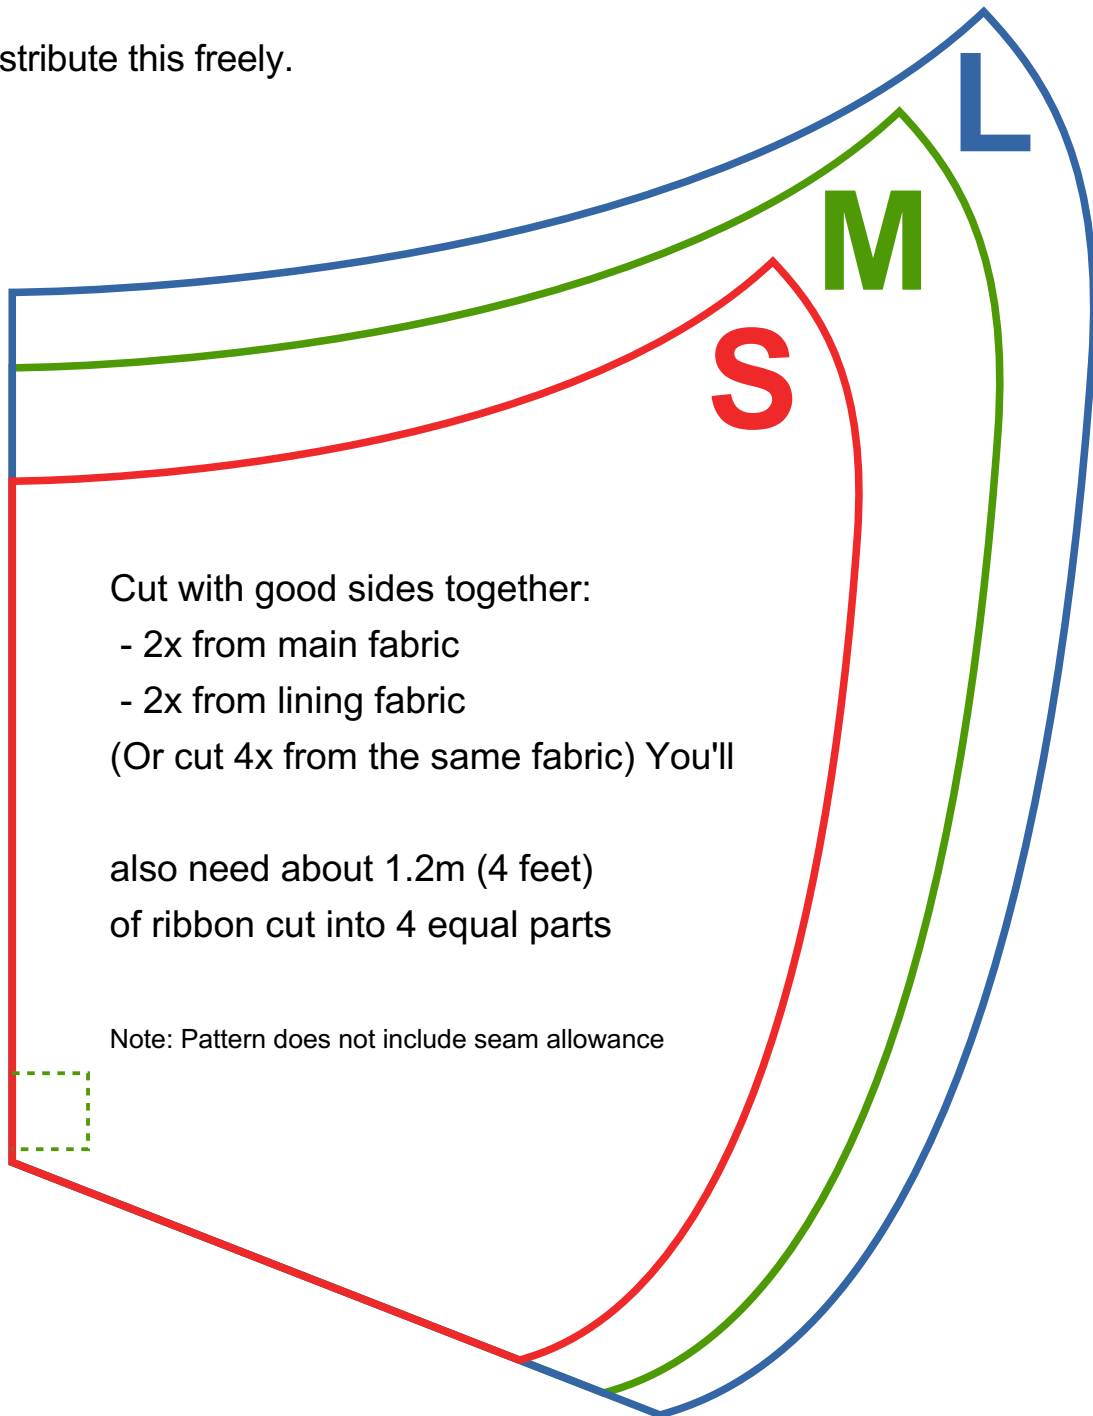

This is based on freeewing.org's Fu Face Maks pattern.

You can generate your own at: <https://freeewing.org/designs/fu/>

Instructions: <https://freeewing.org/docs/patterns/fu/instructions/> You can distribute this freely.

Add $\frac{3}{4}$ inch here to allow for ear strap channel

Cut with good sides together:

- 2x from main fabric
- 2x from lining fabric

(Or cut 4x from the same fabric) You'll

also need about 1.2m (4 feet)
of ribbon cut into 4 equal parts

Note: Pattern does not include seam allowance

The (white) inside of this box should be 10cm wide The
(black) outside of this box should be 4" wide
